### Questions 56-59

According to popular folklore, many animals are smarter than they appear. Dogs bark before earthquake; cattle predict rainfall by sitting on the ground. But cattle may have another hidden talent in telling which way is north.

Small animals such as mole rats living underground are known for the use of magnetism to navigate. Dr. Begall and her colleagues wanted to know whether larger mammals also have the ability to perceive magnetic fields. They investigated this possibility by studying images of thousands of cattle captured on Google Earth, a website that stitches together photographs to produce an image of the Earth’s surface.

Grazing animals are known to orient themselves in a way that minimizes wind chill from the north and maximizes the warmth of the sun when they are cold. The researchers

學系別	考試科目	考試日期	時 間
學士後獸醫學系	英文	112.04.29	08:40-10:00

therefore had to study a lot of cows grazing in lots of different places at different times of day, in order to average out these factors and see whether cattle could act like compass needles.

The researchers concluded that cattle do generally orient themselves in a north-south direction. This north-south preference has also been noted in flies, termites and honeybees. But unfortunately, even the high resolution of Google Earth is not powerful enough to tell which end of the cow is its head, and which its tail. The researchers were therefore unable to answer their research questions of whether cattle prefer to look north or south, and whether that differs in the northern and southern hemispheres.

56. What is the article mainly about?

- (A) The usefulness of Google Earth.
- (B) Whether cattle are superior to other animals.
- (C) Animals' sensitivity to natural disasters.
- (D) Whether cattle behave like compass needles.

57. Which of the following factors might affect Dr. Begall's research result?

- (A) Rainfall.
- (B) Earthquakes.
- (C) Location.
- (D) Google Earth

58. What is the major finding of Dr. Begall's study?

- (A) Cattle point north-south.
- (B) Magnetism can't be studied scientifically.
- (C) Animals prefer to look south.
- (D) Google Earth is a reliable research tool.

59. Why couldn't the researchers get the answer to their research questions?

- (A) Many cattle in their study were sitting on the ground.
- (B) The cattle constantly change directions to avoid wind chill.
- (C) There is magnetic difference between the two hemispheres.
- (D) They couldn't tell a cow's head from its tail in the satellite pictures.

### Questions 65-67

Kauai, the oldest of the main Hawaiian Islands, has some of the state's most stunning scenery. Rivers and streams flow slowly through jungles of shaded greens. The breathtaking 4,000-foot cliffs of Na Pali Coast rise grandly from the sea. Waimea canyon, called the "Grand Canyon of the Pacific" by Mark Twain, cuts a deep gash through the rugged central mountains.

Rising more than 5,000 feet, Mt. Waialeale stands at the center of the nearly round island. This extinct volcano is considered the wettest spot on earth, with almost 500 inches of rainfall each year. Yet his amount of rain is surprisingly localized. Just a few miles west, there's a dry region that receives a mere 6 inches of rain annually.

The island continues to recover from its 1992 visit from Iniki, the most powerful hurricane to hit Hawaii this century. A few hotels are still being rebuilt, but Kauai remains as beautiful as ever.

Kauai is not for people who thrive on crowds or nightlife. While it does have its share of resort hotels, shopping centers and good restaurants, and a smattering of museums, art galleries and night spots, its main attractions lie outdoors. Hiking, camping, and scuba diving are excellent on the island.

65.What is the theme of this passage?

(A) Introduction of a foreign culture.

(B) Historical background of a region.

(C) Discussion of environmental problems.

(D) Geographical information of a place.

### **Questions 68-71**

Three pilot whales are believed to be swimming freely off the Atlantic Coast today. Their names are Tag, Notch, and Baby. These seagoing mammals are among the lucky survivors of a whale-stranding last December at Cape Cod.

As many as 60 pilot whales swam ashore. Scientists are still trying to find out why whales have this self-destructive behavior. Many of the whales died on the beach – crushed by their own weight. Whale experts found Tag, Notch, Baby alive. The three were believed to be too young to survive on their own or returned to sea.

The three whales were taken in a van to the New England Aquarium in Boston, Mass. They were kept in a 60,000-gallon tank for seven months. Only a few people worked with the whales so that they would not become too accustomed to human beings.

Early this past summer the three whales were pronounced fit enough to be returned to the Atlantic Ocean. A month after their release, the whales were spotted. They were found in a group of 50 whales about 60 miles from where they had been set free.

68. The 60 pilot whales swam ashore as a result of

- (A) a large winter storm off the coast of Cape Cod.
- (B) a behavior currently unknown to scientists.
- (C) a genetic phenomenon currently being studied by whale experts.
- (D) the return to their annual spawning ground near Cape Cod.

69. The pilot whales died on the beaches of Cape Cod due to

- (A) the lack of salt water to facilitate their respiration.
- (B) the lack of nutrition to maintain their enormous body weight.
- (C) their body structure unable to support their body weight out of water.
- (D) A phenomenon yet to be figured by scientists.

70. The three whales Tag, Notch, and Baby were rescued because  
(A) younger whales have a greater chance of survival than the others.  
(B) amongst the many whales found beached, these three were deemed the healthiest.  
(C) they were alive when the rescue team found them.  
(D) the rescue crew liked them very much.

71. Which of the following is NOT true?  
(A) Scientists are studying the suicidal behavior of pilot whales.  
(B) Tag, Notch, and Baby were too young to survive by themselves in the sea.  
(C) Pilot whales are mammals that can become used to human beings.  
(D) After their release, Tag, Notch, and Baby were never seen again.

### **Questions 72-76**

Experts say that the creativity by definition means going against the tradition and breaking the rules. To be creative, you must dare 72, and courageously express your own outlook and 73 what makes you unique.

But does our society encourage children to break the rules? I'm afraid the answer is no. The famous film director Ang Lee recalls his father's disappointment with him when he was young. 74 a small child, he would pick up a broom and pretend to be playing guitar for the entertainment of family guests. Then, when he was studying film in college, he would exhaust himself just for a performance tour. His father, 75 always hoped that he would get a PhD and become a professor, 76 with a scoff: "What is all this nonsense?!" But it later turned out that it was exactly his courage to "rebel" and to express his own ideas that marks his films with distinct creativity.

72. (A) rebel (B) to rebel (C) rebelling (D) be rebelled

73. (A) take pride in (B) fall short of (C) get out of (D) keep up with

74. (A) Since (B) For (C) To (D) As

75. (A) who (B) while (C) that (D) when

76. (A) relieved (B) relaxed (C) relied (D) reacted

### **Questions 77-80**

In India, as in many places, rap music is often a form of protest. In fact, this follows the original tradition of the genre. Rap music began in New York as a way for Black Americans to speak about racism, discrimination, and other social injustices facing their community. 77 Indian rappers use their music to talk about both problems that affect them personally and general injustices they see in their country.

For example, just before COVID-19 hit, the Indian government passed the Citizenship Amendment Act. This offered citizenship to non-Muslim immigrants from certain nearby countries. \_\_\_78\_\_\_ Protesters took to the streets to voice their disagreement with the new rule, and rappers took to their microphones to do the same. Shumais Nazar and Manosh Kochi released a track in support of the protests entitled “Streetocracy,” Sumit Roy put out “Go Protest,” and Arivu’s song “sanda seivom” translates into “Let’s Fight.”

\_\_\_79\_\_\_ It has also discussed violence against Indian women, uncaring politicians, farmer suicides, and the injustice of the country’s system of social hierarchy. It’s not all just tough words, though – the music can bring about real change. \_\_\_80\_\_\_ Many people, rappers and fans alike, see rap music as a way to give a voice to the voiceless. According to rapper TM Krishna, this is because rap music “is direct and in your face, it demands attention.” Indian rappers have a lot to say – and they aren’t afraid to say it.

(A) In 2015, a viral rap song helped 591 ex-employees of Unilever in Kodaikanal receive compensation for mercury poisoning – even though the company had shut down 15 years ago.

(B) However, many people saw it as a way for the government to continue discriminating against India’s Muslim population.

(C) These days, people all over the world use rap to discuss social and political issues, and the people of India are no exception.
